

Cybersecurity incidents

Definition ([INCIBE](#))

Any event affecting the confidentiality, integrity or availability of the Company's information assets, for example: unauthorized access or attempted access to systems, use, disclosure, modification or destruction of information.

Definition ([uv.mx](#))

A Cybersecurity incident is an unexpected or unwanted event or series of events that have a significant likelihood of compromising business operations; causing a loss or improper use of information, partial or total interruption of the Systems, being the most common, infection by malware, phishing, etc.

Cybersecurity incidents

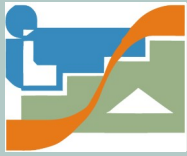

Definition ([rfc 2828](#))

A security-relevant system event in which the system's security policy is disobeyed or violated.

Any adverse event that compromises any aspect of the computer or network security

Definition

An incident is something stressful, that causes a lot of damage to a victim and that the team that must manage it alters their daily work routine, with what they have impact for everyone involved

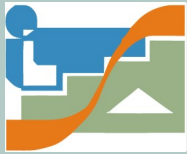

Cheswick, W

*"Firewalls and Internet Security.
Repelling the Wily Hacker,"*

"There is no absolute security."

"Security is always an economic issue."

"An attacker doesn't go through security, he goes around it."

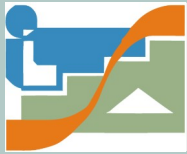

"It's a bad idea to rely on 'security by obscurity'."

"Keep it simple."

"Don't give a person or program more privileges than are strictly necessary."

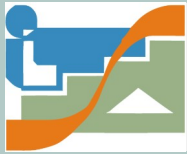

"Safety should be an integral part of the original designs."

"If you don't run a program, it doesn't matter if it has security flaws."

"A program or protocol is unsafe until proven otherwise."

"A chain is only as strong as its weakest link."

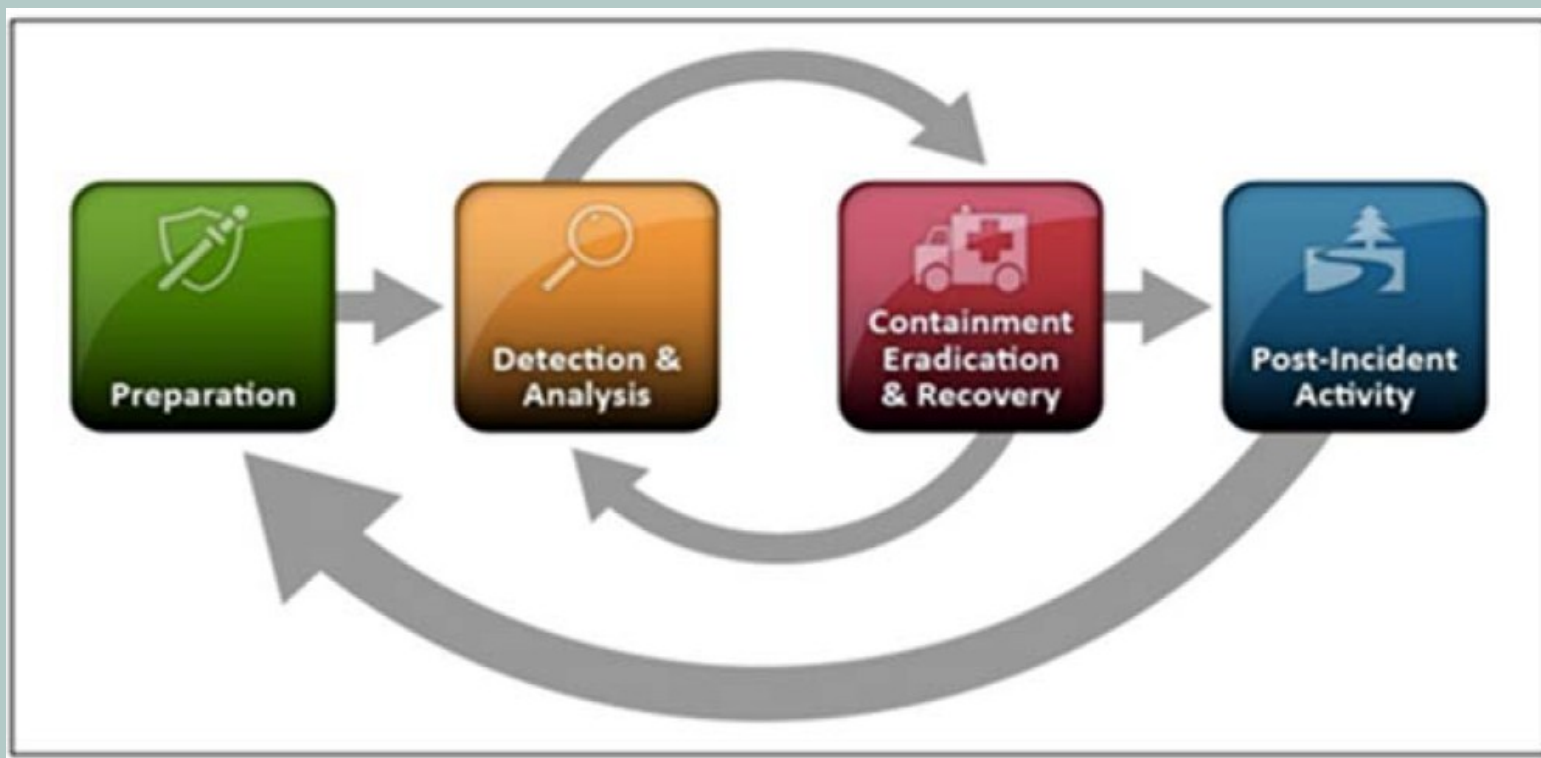

Cybersecurity incidents

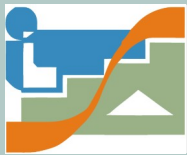

There are two types of companies. Those who have been hacked and those who still don't know they have been hacked.

- John Chambers, CEO de Cisco Systems (1983-2015)
