

Activity: Cobian Backup 11

Use a virtual machine with W10 Professional 64bits.

Create a folder on the desktop

Prepare 4 folders inside the created folder. (Call them: ONE, TWO, THREE, FOUR)

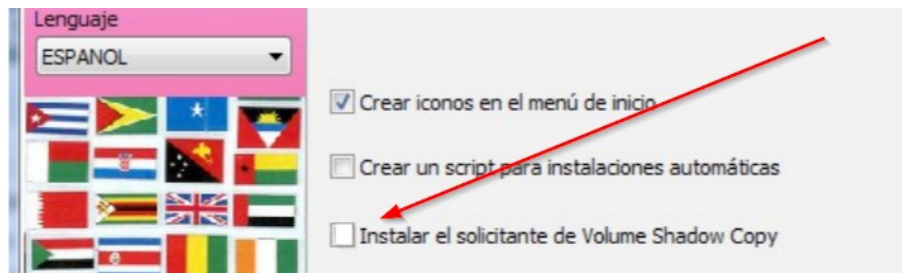

Prepare 2 text files with content in each folder, call them whatever you want.

Visualize and observe the "Attributes" Field/Column of the files involved in the practice.

What information do they have? That means?

Use [Sagrario Pedraza](#)'s manual to install the Cobian Backup 11 utility.

Pay attention to the Volume Shadow Copy Check, **uncheck it!**

Note that the tasks will run on their own. Let them do it when it's their turn, don't run them manually.

Create your first task:

Schedule an incremental copy every 10 min.

Indicates that the copy is made from the created folders, and the destination is in a folder within Documents. You can also target another hard drive (if your computer has one)

Let the program run the first copy. Observe the result.

In the time between copies, modify some file, add another file.

See the folders created.

are there empty folders? do you need how can this be fixed?

Create a task with more options.

Analyze each of the task windows.

Use the pre-copy (close a program) and post-copy (turn off the computer) execution options.

Use a filter to not copy video files.

Use file encryption. (indicate the encryption key)

When the copy is created, what format do they have? How can they be deciphered?

Learn to observe and interpret logs, which in Cobian are called Diaries

Configure the application to send the logs to your email account

Open the menu Tools – Options

Study the “Diary” and “Mail” tabs

Configure to have the Journal sent to your email.

Set up an incremental copy, which keeps 2 full copies and performs a full one every 2 incrementals.

Manually run repeated copies to observe how it is creating complete and deleting obsolete copies.

Download the free version of EaseUS backup software

<https://es.easeus.com/backup-software/todo-backup-free.html>

Install, configure and schedule a backup of the previously created folders.

Let the copy run, and check the results.

Compare the two products (cobian and easeUS)

Document the entire process in pdf format.

Sign it with your digital certificate.

And don't forget to follow the instructions in the Aules document "How to do a class assignment"
