

Activity: Phishing Training

One way for users to be prepared for Phishing attacks is by receiving training and education.

For this, the company can launch training campaigns.

With this tool (there are many, but this one is open source and free), you can configure and run a training campaign to prepare users for phishing attacks.

The tool will be Gophish.

The work will be

- Install and configure the tool
- Prepare a phishing-training campaign for your classmates
- Launch the campaign and observe the results

Look for other alternatives to this tool and document them at the end of the work.

Deliver the final result in a document in PDF format, with metadata about the work, and signed electronically.

Document the entire process in pdf format.

Sign it with your digital certificate.

And don't forget to follow the instructions in the Aules document "How to do a class assignment"
