

Activity: Hydra

Another way to test how easy is to break a system: hydra

Hydra is a tool that tries to make ssh connections and uses combinations or password dictionaries

There is a new machine in the classroom network.
Look for it and try to break the enter with this tool

First of all, learn about the hydra tool. Search for information on the internet.

Clue: There is only one user, root.

Clue2: The password, maybe, you could find within de machine http site.

Document the entire process in pdf format.

Sign it with your digital certificate.

And don't forget to follow the instructions in the Aules document "How to do a class assignment"
