

Activity: OSINT

Open Source INTeelligence. It is the process of researching public data online, to see how much information can be obtained about resources such as the IP address of a computer, a company or even a person.

Activity

1. Find information about OSINT. What is? How can you help?
2. Find 4 OSINT tools
3. Explain what information we can collect with each of them
4. Describe how they work
5. Show an example of the use of each of them.

Document the entire process in pdf format.

Sign it with your digital certificate.

And don't forget to follow the instructions in the Aules document "How to do a class assignment"
